

Hackers, Worms, Viruses, Data Loss, Fraud...

If your network is not protected appropriately, these threats can potentially stop your organization from functioning. At the very least, they inhibit productivity and efficiency on a daily basis. How much more profitable would your company be if it didn't have to worry about these intrusions? Perhaps a more important question is: how much are you willing to lose if you're not adequately protected?

Faye, Pollack & Associates, Inc. has provided a full range of IT services to growing businesses since 1991. FPA analyzes, recommends, and ultimately provides the combination of hardware, software, and service that most closely matches the clients' needs. Unlike many firms, the goal is not to sell computer equipment to the clients, but to communicate and implement computer knowledge and expertise, in order to help the clients achieve their business goals.

The Issue:

Are you concerned that your network isn't as secure as it should be?

The Solution:

A *Network Security Review* from Faye Pollack & Associates, Inc. will provide invaluable information to remedy your problem.

How to Get Started:

Call or email FPA to schedule a *Network Security Review*.

3 Reasons Why Network Security is Becoming More Important

1. Networks are becoming more open & easier to access
2. Security threats are advancing in speed, complexity, & strength
3. Consequences for inadequate network protection are increasing in severity

Network Security Review Service Includes:

1. Inventory and documentation of all existing systems
2. Testing of current security access
3. Generated report of security 'gaps', other findings, & options for addressing the issues
4. Meeting with the FPA team to review findings and examine alternatives
